CHROMABOND® QuEChERS mixes

The QuEChERS method

Within a few years after its development by Anastassiades et al. the QuEChERS method has gained a leading position in the determination of pesticide residues in food samples by GC-MS or LC-MS, allowing rapid and cheap clean-up of strongly matrix-contaminated samples.¹

New, convenient Stick format

For an optimized handling and increased productivity in the lab. Stick format packed in aluminum packets.
